

# CONSTANT VOLTAGE & CONSTANT CURRENT CONTROLLER TJ1051

## FEATURES

- Constant Voltage and Constant Current Control
- Low Voltage Operation
- Precision Internal Component Count
- Current Sink Output Stage
- Easy Compensation
- Low AC Mains Voltage Rejection
- Moisture Sensitivity Level 3

## APPLICATION

- Battery Chargers
- Adapters

## ORDERING INFORMATION

Device	Package
TJ1051SF6	SOT-23 6L
TJ1051D	SOP-8

## DESCRIPTION

TJ1051 is a highly integrated solution for SMPS applications requiring constant voltage and constant current mode. TJ1051 integrates one voltage reference, two operational amplifiers (with one output - common collectors), and a current sensing circuit. The voltage reference combined with one operational amplifier makes it an ideal voltage controller, and the other low voltage reference combined with the other operational amplifier makes it an ideal current limiter for output low side current sensing. The current threshold is fixed and precise. The only external components are :

- A resistor bridge to be connected to the output of the power supply (adaptor, battery charger) to set the voltage regulation by dividing the desired output voltage to match the internal voltage reference value.
- A sense resistor having a value and allowable dissipation power which need to be chosen according to the internal voltage threshold.

TJ1051 is ideal for space shrunk applications such as adapters and battery chargers.

## Absolute Maximum Ratings

( $T_A = 25^\circ\text{C}$ , unless otherwise specified)

CHARACTERISTIC	SYMBOL	MIN.	MAX.	UNIT
DC Supply Voltage	$V_{CC}$	-	14	V
Input Voltage	$V_{IN}$	-0.3	$V_{CC}$	V
Operating Free Air Temperature Range	$T_{OPR}$	0	85	$^\circ\text{C}$
Maximum Junction Temperature	$T_J$	-	150	$^\circ\text{C}$

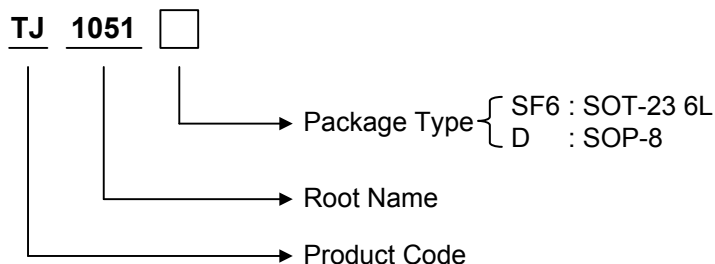

## Operating Conditions ( $T_A=25^\circ\text{C}$ )

CHARACTERISTIC	SYMBOL	MIN.	MAX.	UNIT
DC Supply Voltage	$V_{CC}$	2.5	12	V

## Ordering Information

Package	Order No.	Package Marking	Supplied As	Status
SOT-23 6L	TJ1051SF6	S	Reel	Active
SOP-8	TJ1051D	TJ1051	Reel	Active

## PIN CONFIGURATION

## PIN DESCRIPTION

Pin No.	SOT-23 6L		SOP-8	
	Name	Function	Name	Function
1	V <sub>CTRL</sub>	Analog Input	V <sub>CTRL</sub>	Analog Input
2	GND	Ground	V <sub>CC</sub>	Power Supply
3	OUT	Current Sink Output	V <sub>SENSE</sub>	Analog Input
4	I <sub>CTRL</sub>	Analog Input	NC	-
5	V <sub>SENSE</sub>	Analog Input	NC	-
6	V <sub>CC</sub>	Power Supply	I <sub>CTRL</sub>	Analog Input
7	-	-	OUT	Current Sink Output
8	-	-	GND	Ground

## ELECTRICAL CHARACTERISTICS

( $T_A=25^\circ\text{C}$  and  $V_{CC} = +5\text{V}$ , unless otherwise specified)

Symbol	Parameters	Condition	Min.	Typ.	Max.	Unit
<b>Total Current Consumption</b>						
$I_{CC}$	Total Supply Current - not taking the output sinking current into account	$T_A = 25^\circ\text{C}$ $0 < T_A < 85^\circ\text{C}$		1.1 1.2	2	mA
<b>Voltage Control Loop</b>						
$G_{MV}$	Transconduction Gain ( $V_{CTRL}$ ). Sink Current Only (Note 1)	$T_A = 25^\circ\text{C}$ $0 < T_A < 85^\circ\text{C}$	1	3.5 2.5		mA/mV
$V_{REF}$	Voltage Control Loop (Note 2)	$T_A = 25^\circ\text{C}$ $0 < T_A < 85^\circ\text{C}$	1.198 1.186	1.21	1.222 1.234	V
$I_{IBV}$	Input Bias Current ( $V_{CTRL}$ )	$T_A = 25^\circ\text{C}$ $0 < T_A < 85^\circ\text{C}$		50 100		nA
<b>Current Control Loop</b>						
$G_{MI}$	Transconduction Gain ( $I_{CTRL}$ ). Sink Current Only (Note 3)	$T_A = 25^\circ\text{C}$ $0 < T_A < 85^\circ\text{C}$	1.5	7		mA/mV
$V_{SENSE}$	Current Control Loop (Note 4)	$I_{out} = 2.5 \text{ mA}$ $0 < T_A < 85^\circ\text{C}$	196 192	200	204 208	mV
$I_{IBI}$	Current out of pin $I_{CTRL}$ at -200mV	$T_A = 25^\circ\text{C}$ $0 < T_A < 85^\circ\text{C}$		30 40		$\mu\text{A}$
<b>Output Stage</b>						
$V_{OL}$	Low output voltage at 10 mA sinking current	$T_A = 25^\circ\text{C}$ $0 < T_A < 85^\circ\text{C}$		200		mV
$I_{OS}$	Output Short Circuit Current. Output to $V_{CC}$ . Sink Current Only	$T_A = 25^\circ\text{C}$ $0 < T_A < 85^\circ\text{C}$		27 35	60	mA

Note 1. If the voltage on  $V_{CTRL}$  (the negative input of the amplifier) is higher than the positive amplifier input ( $V_{REF}=1.210\text{V}$ ), and it is increased by 1mV, the sinking current at the output will be increased by 3.5mA.

Note 2. The internal Voltage Reference is set at 1.210V (bandgap reference). The voltage control loop precision takes into account the cumulative effects of the internal voltage reference deviation as well as the input offset voltage of the trans-conductance operational amplifier. The internal Voltage Reference is fixed by bandgap, and trimmed to 0.5% accuracy at room temperature.

Note 3. When the positive input at  $I_{CTRL}$  is lower than -200mV, and the voltage is decreased by 1mV, the sinking current at the output will be increased by 7mA.

Note 4. The internal current sense threshold is set to -200mV. The current control loop precision takes into account the cumulative effects of the internal voltage reference deviation as well as the input offset voltage of the trans-conductance operational amplifier.

## TYPICAL APPLICATION CIRCUIT

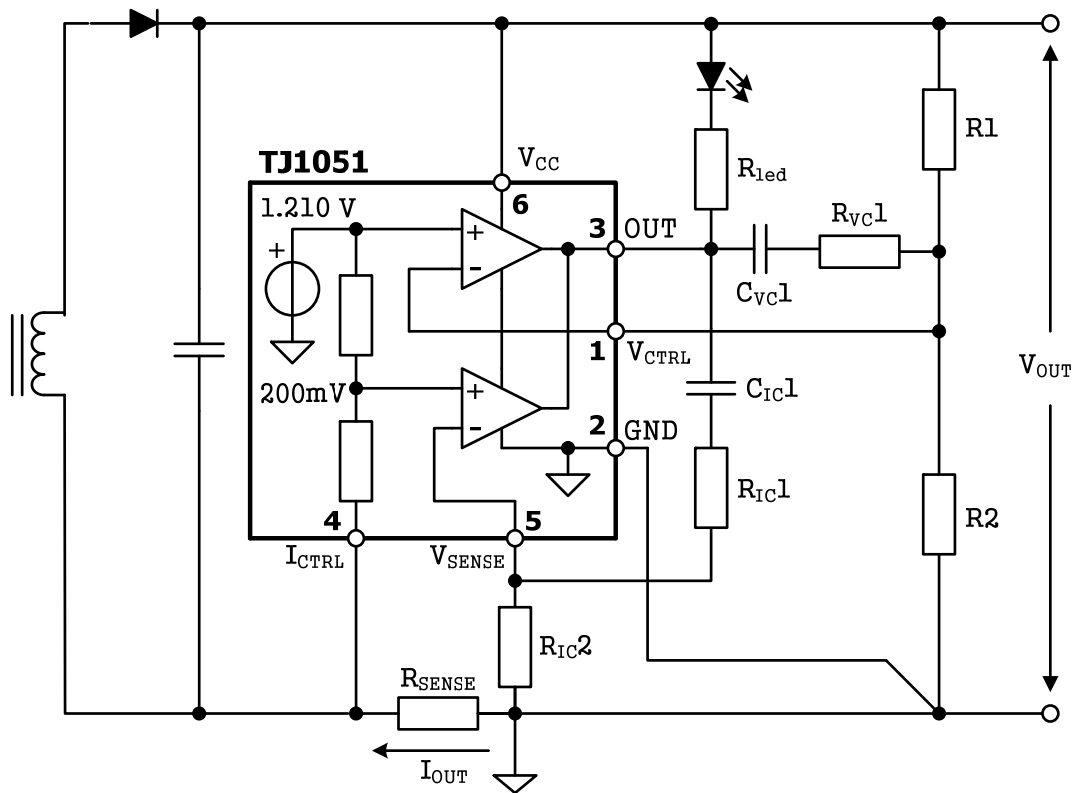

Fig 1. Typical Adaptor or Battery Charger Application Using TJ1051

In the above application schematic, the device is used on the secondary side of a flyback adaptor (or battery charger) to provide an accurate control of voltage and current. The above feedback loop is made with an optocoupler.
