

Temperature Switch

MM3488

Outline

This IC is a temperature switch IC that senses the ambient temperature of the IC and switches the IC output at the detected temperature (active high, active low), and has the hysteresis function. The detection temperature (TDET) can be selected in 1.0°C steps between 25 °C to 90 °C high temperature detection type and between -20 to +24 °C low temperature detection type, with detection temperature accuracy of ±2.0°C.
