

Low current consumption 150mA LDO

# MM3755 Series

## Overview

This IC is a low current consumption 150mA LDO. The IC can be better low current consumption and load transient by bias boost circuit. The package is a small PLP-4C (1mm x 1mm), ideal for mobile devices.

## Features

- Low quiescent current
- High speed response
- High accuracy output voltage

( $V_{DD}=V_{OUT}(\text{Typ.})+1V$ ,  $V_{CE}=V_{DD}$ ,  $T_a=25^\circ\text{C}$  unless otherwise specified)

## Main specifications

■ Maximum rating supply voltage	: -0.3V ~ 7V
■ Operating voltage range	: 1.7V to 6V
■ Operating ambient temperature	: -40°C to 85°C
■ Output current	: 150mA
■ Input current (OFF)	: Typ. 0.1uA
■ No-load input current	: Typ. 0.9uA ( $V_{OUT}(\text{Typ.}) \leq 3.3V$ ) Typ. 1.2uA ( $3.3V < V_{OUT}(\text{Typ.})$ )
■ Output voltage range	: 1.2V to 5V (0.1V step)
■ Output voltage accuracy	: $\pm 0.8\%$ ( $2.0V \leq V_{OUT}(\text{Typ.})$ ) $\pm 16mV$ ( $V_{OUT}(\text{Typ.}) < 2.0V$ )
■ Line regulation	: Typ. $0.02\%/\text{V}$ ( $V_{DD}=V_{OUT}(\text{Typ.})+0.5V$ to 6V)
■ Load regulation	: Typ. 10mV ( $I_{OUT}=1\text{mA}$ to 150mA)
■ Dropout voltage	: Typ. 0.24V ( $I_{OUT}=150\text{mA}$ , $V_{OUT}(\text{Typ.})=3V$ )
■ PSRR	: Typ. 50dB ( $f=1\text{kHz}$ )
■ Output noise voltage	: Typ. $60\mu\text{VRms}$ ( $f_{BW}=10\text{Hz}$ to $100\text{kHz}$ , $I_{OUT}=30\text{mA}$ )
■ Output capacitor	: 0.1uF (Ceramic capacitor)
■ Protection function	: Over current protection
■ Additional function	: ON/OFF control, Auto discharge

## Packages

- PLP-4C

## Application

- Portable communication device
- Photographing / Imaging device
- Wearable device
- Health care device

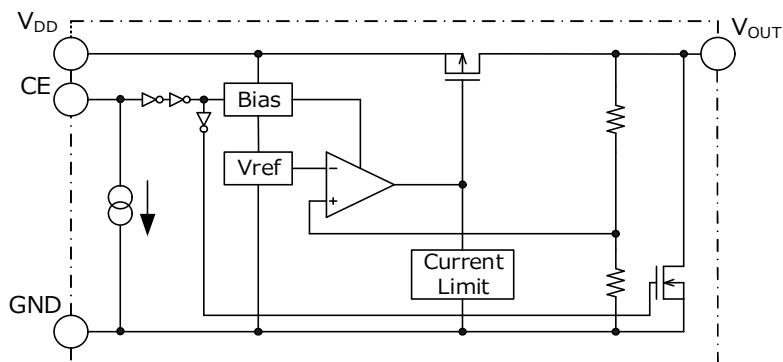

## Model Name

M M 3 7 5 5 X X X X X E

- C rank (CE=H active, without discharge function)

**Pin Configuration**

■ PLP-4C

Pin No.	Pin name	Function
1	V <sub>OUT</sub>	Output pin
2	GND	GND pin
3	CE	ON/OFF-control pin Connect CE pin with VDD pin, when it is not used. The CE terminal performs pull-down by constant current.
4	V <sub>DD</sub>	Voltage supply pin

\*Note1:Heat spreader bottom with GND.

## Absolute Maximum Ratings

Item	Symbol	Min.	Max.	Unit
Storage temperature	T <sub>STG</sub>	-55	150	°C
Junction temperature	T <sub>JMAX</sub>	-	150	°C
Supply voltage	V <sub>DD</sub>	-0.3	7.0	V
CE input voltage	V <sub>CE</sub>	-0.3	7.0	V
Output voltage	V <sub>OUT</sub>	-0.3	V <sub>DD</sub> +0.3V	V
Output current	I <sub>OMAX</sub>	0	200	mA
Power dissipation *Note2	P <sub>D</sub>	-	1300	mW

\*Note2: JEDEC51-7 standard

## Recommended Operating Conditions

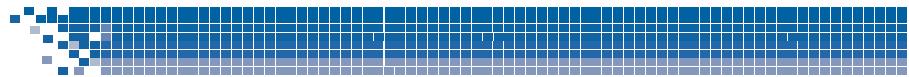

Item	Symbol	Min.	Max.	Unit
Operating ambient temperature	T <sub>OPR</sub>	-40	85	°C
Operating voltage	V <sub>OP</sub>	1.7	6.0	V
Output current	I <sub>OP</sub>	0	150	mA

## Electrical Characteristics

(V<sub>DD</sub>=V<sub>OUT</sub>(Typ.)+1V, V<sub>CE</sub>=V<sub>DD</sub>, Ta=25°C unless otherwise specified)

The specifications with under bar are guaranteed by design.

Item	Symbol	Conditions	Min.	Typ.	Max.	Unit
Input current(OFF)	I <sub>DDOFF</sub>	V <sub>CE</sub> =0V	-	0.1	1.0	µA
No-Load Input Current	I <sub>DD</sub>	1.2V≤V <sub>OUT</sub> ≤3.3V I <sub>OUT</sub> =0mA	-	0.9	<u>1.5</u>	µA
		3.4V≤V <sub>OUT</sub> ≤5.0V I <sub>OUT</sub> =0mA	-	1.2	<u>2.0</u>	µA
Output voltage	V <sub>OUT</sub>	V <sub>OUT</sub> >2.0V	x0.992	-	x1.008	V
		V <sub>OUT</sub> ≤2.0V	-16	-	16	mV
		V <sub>OUT</sub> >2.0V -40≤Ta≤85°C	x0.978	-	<u>x1.022</u>	V
		V <sub>OUT</sub> ≤2.0V -40≤Ta≤85°C	<u>-44</u>	-	<u>44</u>	mV
Line regulation	V <sub>LINE</sub>	V <sub>OUT</sub> (Typ.)+0.5V≤V <sub>DD</sub> ≤6.0V	-	0.02	<u>0.10</u>	%/V
Load regulation	V <sub>LOAD</sub>	1mA≤I <sub>OUT</sub> ≤150mA	-	10	<u>20</u>	mV
Dropout voltage	V <sub>IO</sub>	Please refer to another page.	-	-	-	V

## Electrical Characteristics

( $V_{DD}=V_{OUT}(\text{Typ.})+1V$ ,  $V_{CE}=V_{DD}$ ,  $T_a=25^\circ\text{C}$  unless otherwise specified)

The specifications with under bar are guaranteed by design.

Item	Symbol	Conditions	Min.	Typ.	Max.	Unit
Ripple rejection *Note3	$R_R$	$f=1\text{kHz}$ , $V_{ripple}=0.5\text{V}$ $I_{OUT}=30\text{mA}$	-	50	-	dB
Output noise voltage *Note3	$V_n$	$f_{BW}=10\text{Hz}\sim100\text{kHz}$ $I_{OUT}=30\text{mA}$	-	60	-	$\mu\text{Vrms}$
Vout temperature coefficient *Note3	$\Delta V_{OUT}/\Delta T_{OPR}$	$-40 \leq T_{opr} \leq 85^\circ\text{C}$	-	<u>±80</u>	-	ppm/ $^\circ\text{C}$
Output short-circuit current *Note3	$I_{short}$	$V_{OUT}=0\text{V}$	-	100	-	mA
CE High threshold voltage	$V_{CEH}$		<u>1.5</u>	-	$V_{DD}$	V
CE Low threshold voltage	$V_{CEL}$		0	-	<u>0.3</u>	V
CE pin current *Note3	$I_{CEH}$		-	0.3	-	$\mu\text{A}$
Output NMOS ON resistance *Note3,4	$R_{DON}$	$V_{CE}=0\text{V}$ , $V_{DD}=4\text{V}$	-	10	-	$\Omega$

\*Note3: The parameter is guaranteed by design.

\*Note4: This parameter is only MM3755A series.

\*Note5: Dropout voltage MAX value in the input and it is confirmed that there is no output abnormal voltage impression the load 150mA in the model less than  $V_{out}<2.5V$ .

## Test Circuit

## Application Circuit

(Example of external parts)

- Output capacitor      Ceramic capacitor 0.1μF
- Input capacitor      Ceramic capacitor 0.1μF

\*Temperature characteristics : B

- In the event a problem which may affect industrial property or any other rights of us or a third party is encountered during the use of information described in these circuit, we shall not be liable for any such problem, nor grant a license therefore.

**Note**

1. Please use this IC within the stated absolute maximum ratings.  
The IC is liable to malfunction should the ratings be exceeded.
2. Due to restrictions on the package power dissipation, the output current value may not be satisfied.  
Attention should be paid to the power dissipation of the package when the output current is large or the voltage between Input and Output is high.
3. The output capacitor is required between output and GND to prevent oscillation.
4. The ESR of capacitor must be defined in ESR stability area.  
It is possible to use a ceramic capacitor without ESR resistance for output.  
The ceramic capacitor must be used more than 0.1μF and B temperature characteristics.
5. The wire of VDD and GND is required to print full ground plane for noise and stability.
6. The input capacitor must be connected a distance of less than 1cm from input pin.
7. It is able to oscillation when you use the capacitor with intense capacitance change such as micro.  
Please evaluate IC in the set.
8. In case the output voltage is above the input voltage, the overcurrent flow by internal parasitic diode from output to input.  
In such application, the external bypass diode must be connected between output and input pin.
9. This IC will limit the output current with the overcurrent protection circuit when the overcurrent and the output do short-circuit.  
However, IC generates heat because of the substrate and use conditions and there is a possibility of destroying it exceeding a permissible loss.  
The characteristic changes depending on the substrate condition.  
Please evaluate IC in the set.
10. Please keep in mind that output voltage may rise by the leakage current of a power transistor if it is used by low load current( $I_o < 10\mu A$ ) at the time of high temperature.
11. When the terminal VDD(CE) is OFF→ON, the overshoot might be generated.  
The size of the overshoot depends on "output capacity", "output load", a "voltage rank", and "VDD standup speed." and please evaluate it enough with a real machine.  
Please refer to typical performance characteristics of the Turn-ON Transient Response.
12. There is a possibility of becoming load transient response characteristic deteriorates.  
when using it with Dropout voltage less than about 1V. Please evaluate it enough  
when there is no margin in Dropout voltage. Please refer to typical performance characteristics.
13. The CE terminal is pulled down by an internal constant current source.  
The pull-down capability is set to a small value of  $0.1\mu A$  (Typ.).  
Depending on the value of noise or leak current, pull-down may not be possible.  
Please use the product after thoroughly evaluating it on the actual machine.  
Be sure to design the CE terminal to operate with low impedance (I/O output, etc.), while avoiding pull-down due to open circuit.

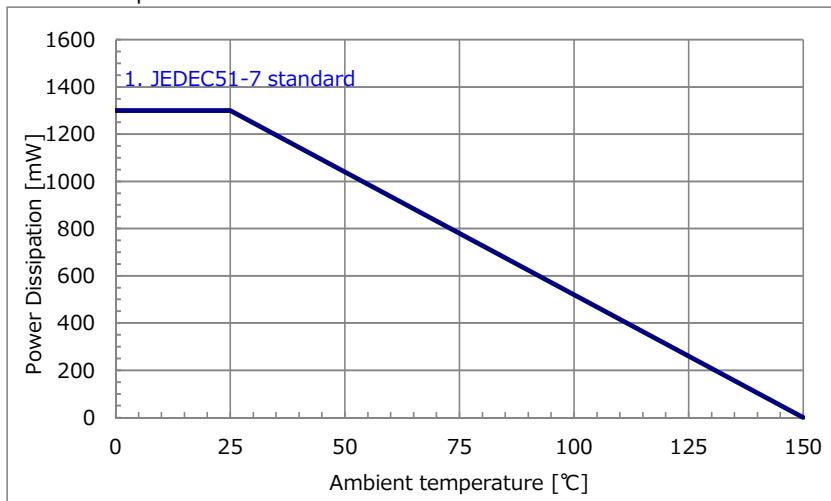

## About Power Dissipation

The Power dissipation change if board to mount IC change because radiative heat fix at board.  
It is reference data below, Evaluate IC in the set.

### ■ PLP-4C

#### 1. JEDEC51-7 standard (4 layer FR-4 board)

Board size                            114.3mm×76.2mm t=1.6mm Copper foil area 80%  
Power dissipation                    1300mW Ta=25°C

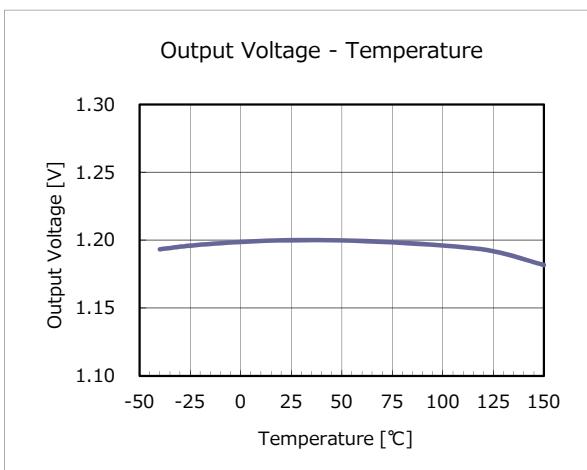

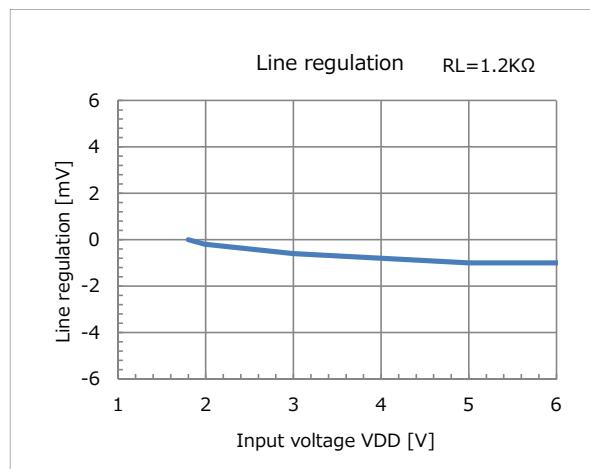

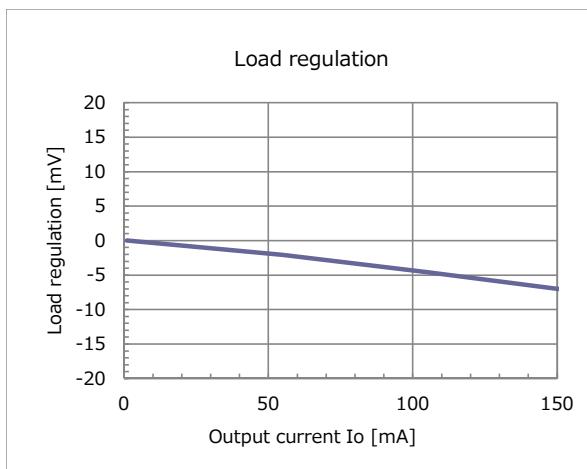

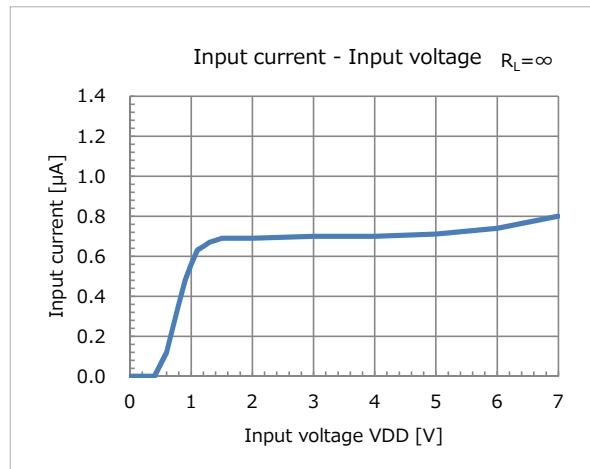

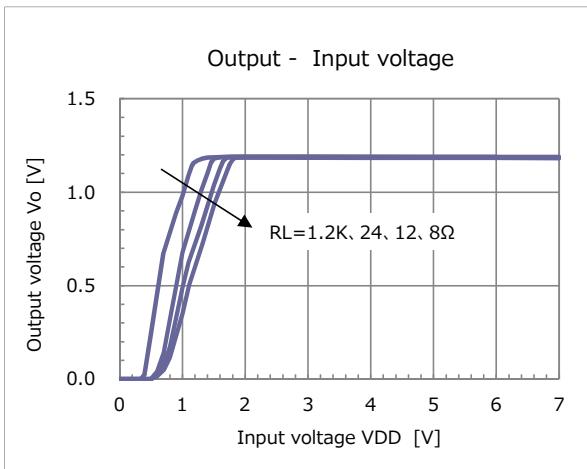

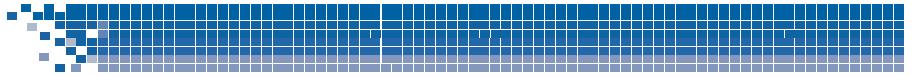

It is recommended to layout the VIA for heat radiation in the GND pattern of reverse (of IC) when there is the GND pattern in the inner layer (in using multiplayer substrate).  
By increasing these copper foil pattern area of PCB, Power dissipation improves.

**Typical Performance Characteristics (1.2V)**
